Correction: Voltage issue of aqueous rechargeable metal-ion batteries

Zhuoxin Liu, Yan Huang, Yang Huang, Qi Yang, Xinliang Li, Zhaodong Huang and Chunyi Zhi*

The authors regret that there were errors in Fig. 6, 10, 15 and 19 in the original article. The labels for H₂ evolution and O₂ evolution were misplaced in the original figures. The corrected versions of these figures are as shown below.

Fig. 6  Comparison of redox potentials of representative electrode materials for ALIBs. Red-colour columns and blue-colour columns represent cathodes and anodes, respectively.
Fig. 10 Comparison of redox potentials of representative electrode materials for ASIBs and AKIBs. Red-colour columns and blue-colour columns represent cathodes and anodes, respectively.

Fig. 15 Comparison of redox potentials of representative electrode materials for AZIBs. Red-colour columns and green-colour column represent cathodes and zinc metal anode, respectively. (Some conversion-type NiCo compounds are also included.)

Fig. 19 Comparison of redox potentials of representative electrode materials for AMIBs, ACIBs and AAIBs. Red-colour columns and blue-colour columns represent cathodes and anodes, respectively.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
