Corrigendum
Three-type Fano interference controlled by the phase transition of Eu$^{3+}$/Pr$^{3+}$: YPO$_4$ (2020 New J. Phys. 22 093008)
Fan, Huanrong; Raza, Faizan; Ahmed, Irfan; Li, Kangkang; Ullah, Habib; Zhang, Yanpeng

Keywords: dressed spontaneous parametric four-wave mixing Fano, dressed multi-order fluorescence Fano, hybrid Fano interference, phase transition

The captions for figures 3 and 4 in [Fan et al 2020 New J. Phys. 22 093008] contain some mistakes which are corrected in this corrigendum.

![Figure 3](image)

Figure 3. (a1)–(a5) Shows the energy level for pure enhancement, suppression + enhancement, pure suppression, enhancement + suppression, and pure enhancement, respectively. (b1)–(b5) and (c1)–(c5) show the excitation spectrums of Stokes/anti-Stokes and FL, respectively. The excitation spectra are obtained by scanning wavelengths from 580 nm to 610 nm with different \(\Delta_2\) corresponding to energy levels defined in (a1)–(a5). The dash curves of the profile (baseline) in (b) and (c) represents the SP-FWM and MFL signal without dressing, respectively.

We found that there are some mistakes in captions for figures 3 and 4 in [1]. The correct captions are: The numerical results and conclusions in [1] remain unchanged.
